LONG-TERM GOALS

1. Representing surface fluxes and ocean waves in coupled models in the Beaufort and Chukchi Seas.
2. Understand the physics of heat and mass transfer from the ocean to the atmosphere.
3. Improve forecasting of waves on the open ocean and in the marginal ice zone.

Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

OBJECTIVES

1. Quantifying the open-ocean fluxes of momentum, sensible and latent heat, shortwave radiation, and longwave radiation in the Chukchi and Beaufort Seas.
2. Quantifying atmospheric and oceanic characteristics strongly linked to these fluxes, such as ocean wave characteristics and surface-layer temperature, atmospheric kinetic and thermodynamic profiles, atmospheric cloudiness and basic meteorological parameters.
3. Improving and verifying model parameterizations of turbulent momentum and heat fluxes plus radiative fluxes in the Beaufort and Chukchi Seas
4. Quantifying temporal and spatial variability in surface forcing
5. Providing “ground truth”

APPROACH

Our approach will be to perform the following measurements during a cruise in 2015.

Table 1. Shipboard Measurements

<i>Category – Parameters Measured</i> Sensors
<i>Surface Meteorology</i> – Wind Vector, Air Temperature, Air Humidity, Air Pressure, Precipitation Propeller Anemometer, Aspirated and Shielded Thermistor/Humidity probes, Barometer, Tipping Bucket and Tympani Rain Sensor
<i>Eddy Correlation Fluxes and Spectra</i> – Wind Stress, Sensible + Latent (Moisture) Heat Flux, CO ₂ Flux Sonic Anemometer, Thermistor, LICOR (Humidity, CO₂)
<i>Sky Radiation</i> – Downwelling and Upwelling Solar and Longwave Radiation, Sky Temperature f(band) Pyranometer, pyrgeometer, narrow band IR radiometer, microwave radiometer,
<i>Surface Temperature</i> – Ocean surface temperature, ice surface temperature IR Narrow Band Radiometer, Dragged Thermistor, Ship intake, Manual Bucket
<i>Tropospheric Profiles, 4/day</i> – Pressure, Temperature, Humidity, Wind Vector Rawinsonde (Weather Balloon)
<i>Low-Level Profiles</i> , Pressure, Temperature, Humidity Rawinsonde (Kite)
<i>Wave Characteristics</i> , Wind wave and swell heights lengths, periods and surface wave 2-D spectra Multibeam laser altimeters, fast pressure sensors
<i>Cloud characteristics</i> – cloud cover, cloud base height, water phase Ceilometer, W-band cloud radar
<i>Continuous wind vector profiles</i> - low level wind field 449 MHz wind profiler
<i>Observations</i> , Upwind ice types and concentration, cloud type and coverage, sea state, visibility, weather Human eye, visible and IR photography, range finders

WORK COMPLETED

FY 2103 was a spin-up planning year. The PIs attended planning meetings with other investigators and amongst themselves. The PIs contributed to the preparation of the Sea State DRI Science plan.

RESULTS

At this point only planning has been performed and the PIs have not achieved any scientific results based on work performed with this funding.

IMPACT/APPLICATIONS

The main impact in FY2013 was the planning and preparation of a Science Plan.

RELATED PROJECTS

None
